

2019 CHNA Executive Summary

St. John Sapulpa | Creek County, Okla.

 St. John

 Ascension

2019 CHNA Executive Summary

St. John Sapulpa (SJS), part of Ascension St. John, is pleased to present its fiscal year 2019 community health needs assessment (CHNA). As federally required by the Affordable Care Act, this report provides an overview of the methods and process used to identify and prioritize significant health needs in the community served by SJS. For the purposes of this assessment, SJS's primary service area, or community, is defined as Creek County, Okla. SJS consulted with Conduent Healthy Communities Corp., the Tulsa Health Department and The University of Oklahoma Anne and Henry Zarrow School of Social Work to conduct the CHNA.

The goal of this report is to offer a meaningful understanding of the most pressing health needs across the Creek County community, as well as to guide planning efforts to address those needs. Special attention has been given to the needs of vulnerable populations, unmet health needs or gaps in services, and input from the community.

Findings from this report will be used to identify, develop and target health system, hospital and community initiatives and programming to better serve the health and wellness needs of our community.

Community Served

The community served by SJS is defined as the geographical boundary of Creek County, Okla. Located in east-central Oklahoma, Creek County is bordered by Pawnee County on the north, Tulsa and Okmulgee counties on the east, Okfuskee County on the south, and Lincoln and Payne counties on the west. The cities and towns officially recognized in Creek County are Bristow, Depew, Drumright, Kellyville, Kiefer, Lawrence Creek, Mannford, Mounds, Oilton, Sapulpa, Slick, Stroud and Shamrock. The area has a rich history that includes early Native American inhabitants, the advent of the railroads, and the oil boom.

SJS is based out of the city of Sapulpa. Accordingly, Sapulpa serves as the primary area of focus within the Creek County community. SJS's community health improvement efforts that result from this CHNA will primarily center on Sapulpa. However, an effort was made to focus on the health needs and assets of Creek County as a whole, and our efforts will also extend to other cities and towns within Creek County based on lessons learned through our work with the Sapulpa community.

Demographics

Creek County has a population of approximately 70,931. Older age groups have captured a greater relative share of the population over the past several decades, while the share represented by children has declined. The racial makeup of Creek County is somewhat homogeneous, with 80% of the population identifying as White. American Indians/Alaskan Natives are the second highest of all races in Creek County and is the only other race that makes up over 10% (11.5%) of the population. Creek County has a relatively low percentage of those that identify as Hispanic living in the community (3.4%). Regarding economic stability, families living in Oilton and a portion of West Tulsa (74050) have the highest rates of poverty. Overall, Creek County has higher rates of poverty than other counties in Ascension St. John's service area and in Oklahoma.

Methods for Identifying Community Health Needs

Secondary data

Ascension St. John consulted with the Tulsa Health Department to collect and analyze the secondary data used in the assessment's community overview. A review of publicly available secondary data was conducted. Some data comparisons were made at the ZIP code, region, county, state and national levels. Other data considerations included trends over time, county and state level rankings, benchmark comparisons at the state and national levels, disparities by age, gender, race/ethnicity, income level and educational attainment.

St. John also consulted with Conduent Healthy Communities Corp. for support with secondary data analysis. The analysis included a comprehensive set of more than 100 community health and quality-of-life indicators covering more than 20 topic areas. Indicator values for Creek County were compared with other counties in Oklahoma and nationwide to compare social, economic and health topics. Other considerations for areas of health need included trends over time; Healthy People 2020 targets; Oklahoma targets; and disparities by age, gender and race/ethnicity. The value for each of these indicators was compared with other communities, nationally or locally set targets and previous time periods. A data scoring tool was used to systematically summarize multiple comparisons of the data to rank indicators based on highest need.

In addition, St. John consulted with Conduent Healthy Communities Corp. for support with identifying geographic areas of greatest need in Creek County. To do so, Conduent developed the SocioNeeds Index® to easily compare multiple socioeconomic factors across geographies. This tool incorporates estimates for six different social and economic determinants of health — income, poverty, unemployment, occupation, educational attainment and linguistic barriers — that are associated with poor health outcomes, including preventable hospitalizations and premature death.

Primary data (community input)

Community input is a principal focus of this assessment and is a form of primary data. St. John employed several methods of community input to yield the desired results, including the following:

- **Six community health forums** with around 120 community leaders and 13 health system leaders (one forum with 16 community leaders and two health system leaders in Creek County)
- **Twenty-two focus groups** with 233 community members (one focus group with 10 community members in Creek County)
- **Online survey** of 801 community members (13 in Creek County)
- **Input from the public health workforce and local coalitions/partnerships**
- **Input from the health system's Community Engagement Committee**

The focus groups and online survey were conducted in collaboration with The University of Oklahoma Anne and Henry Zarrow School of Social Work and Tulsa Health Department.

Community input is best obtained from a diverse set of community stakeholders such as community members, community organizations and the public health workforce. A variety of sources ensures that as many different perspectives as possible are represented while satisfying the broad interests of the community. Sources of community input for this assessment were as follows:

- Community members who participated in the online survey and focus groups
- Community leaders and representatives

- Public health workforce and local coalitions/partnerships
- Members and representatives of medically underserved, low-income, minority, at-risk and otherwise vulnerable populations
- Health system and hospital leadership

Community stakeholders who provided input represented a variety of community sectors, including healthcare, education and academia, nonprofit, private business, community development, faith-based communities and organizations, government, safety-net services, economic and workforce development, behavioral health, law enforcement and first responders, public health and other interest groups working with at-risk and vulnerable populations. This assessment especially focused on community input from those with special knowledge or expertise in public health, as well as members and representatives of medically underserved, low-income, minority, at-risk or otherwise vulnerable populations.

How Are We Doing?

County health rankings

Published online at countyhealthrankings.org, the Rankings help counties understand what influences how healthy residents are and how long they will live. The Rankings are unique in their ability to measure the current overall health of nearly every county in all 50 states. They also look at a variety of measures that affect the future health of communities, such as high school graduation rates, access to healthy foods, rates of smoking, obesity, and teen births. The data indicators included in our assessment follow the county health rankings model. Below is a summary; see the SJS CHNA for a full listing of data indicators.

Health outcomes ranking

This indicator demonstrates overall rankings in health outcomes for counties throughout the state. The healthiest county in the state is ranked #1. The ranks are based on two types of measures: how long people live (length of life) and how healthy people feel while alive (quality of life). The distribution of health outcomes is based on an equal weighting of length and quality of life. This information is based on the County Health Rankings & Roadmaps courtesy of the University of Wisconsin Population Health Institute.

The overall rankings in health outcomes represent how healthy counties are within the state. In 2019, Creek County ranked 35th out of 77 counties in Oklahoma in health outcomes. This was an improvement from 40th out of 77 in 2018, 44th out of 77 in 2017, and 49th out of 77 in 2016.

Health factors ranking

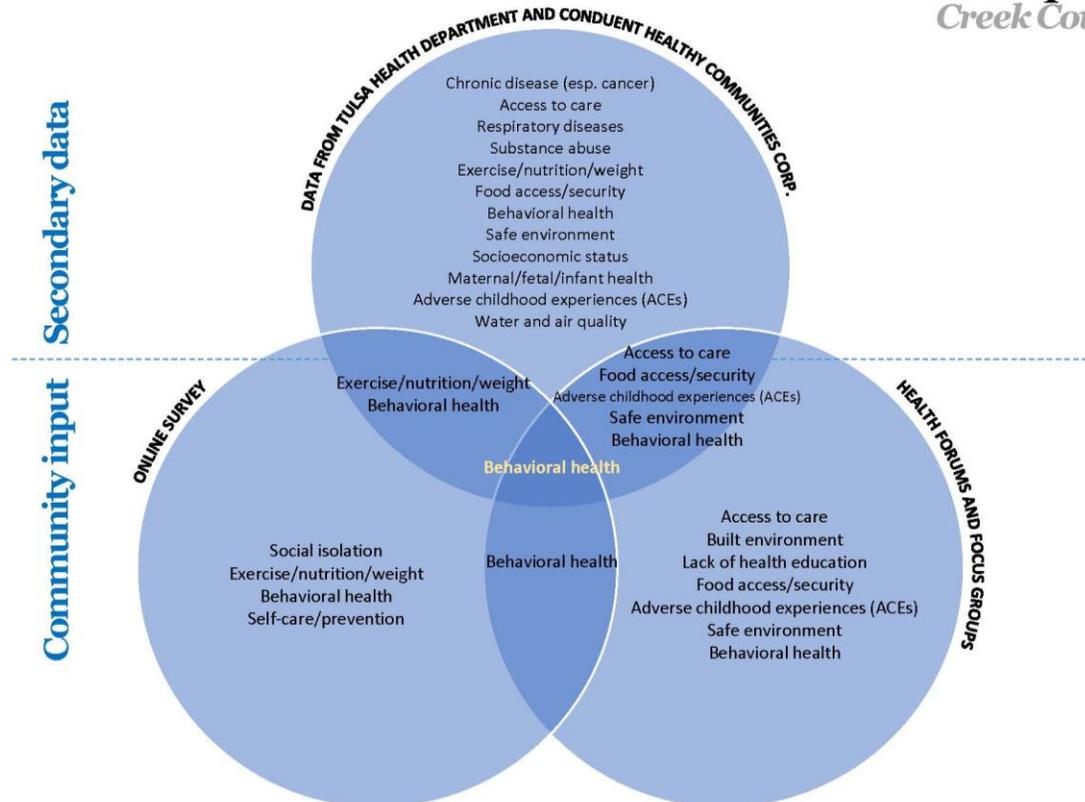

This indicator demonstrates the overall rankings in health factors for counties throughout the state. The ranks are based on weighted scores four types of measures: health behaviors, clinical care, social and economic, and physical environment factors. The healthiest county in the state is ranked #1. This information is based on the County Health Rankings & Roadmaps courtesy of the University of Wisconsin Population Health Institute.

The overall rankings in health factors represent what influences the health of a county. They are an estimate of the future health of counties as compared to other counties within a state. In 2019, Creek County ranked 47th out of 77 counties in Oklahoma in health factors. There has been variation in the ranking over the years, as it was 46th out of 77 in 2018, 48th out of 77 in 2017, and 44th out of 77 in 2016.

Summary of Findings

The CHNA findings are drawn from an analysis of an extensive set of secondary data and in-depth primary data from community leaders, non-health professionals, and organizations that serve the community at large, vulnerable populations, and/or populations with unmet health needs.

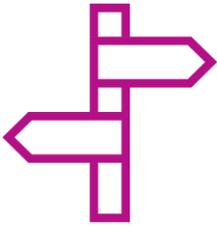

St. John Sapulpa
Creek County

Through these syntheses, the following top health needs were determined:

- Behavioral health
- Exercise/nutrition/weight
- Prevention/health behaviors (e.g., smoking, missing doctor's visits, etc.)
- Access to care
- Chronic disease (esp. cancer)
- Adverse childhood experiences (ACEs)
- Food access/security
- Safe environment
- Substance abuse
- Socioeconomic status
- Immunizations and infectious diseases
- Lack of health education
- Maternal/fetal/infant health

Disparities and geographic areas of greatest need

The identification of disparities along race/ethnicity, gender, age, and geographic lines is important for informing and focusing strategies that will address the prioritized health needs. Primary and secondary data revealed community health disparities along racial lines, with American Indian/Alaskan Native populations more negatively impacted in Creek County. In many ways, women and children face a variety of challenges in Creek County. Many families struggle to be self-sufficient, even while holding down jobs. Medically underserved, low-income, minority, at-risk or otherwise vulnerable populations such as LGBTQ+ and individuals

experiencing homelessness face discrimination and a myriad of barriers to healthy lifestyles and accessing healthcare and other resources, negatively impacting health outcomes. Further, the data shows that older adults face increased health issues, while populations in certain geographic areas were identified as having higher socioeconomic need and potentially poorer health outcomes. Kellyville (ZIP code 74039) has the highest socioeconomic need identified for the county. Women and minority populations experience the highest socioeconomic need in the county.

Prioritized Areas

On March 25, 2019, 13 members of Ascension St. John's Community Engagement Committee (CEC) came together to participate in an individual assessment exercise and group discussion to help prioritize the most significant community health needs identified through community health needs assessment (CHNA) secondary and primary (community input) data analysis and synthesis.

While considering several criteria for prioritization, the following four health needs were identified as priorities to address:

Behavioral health

Access to care

Healthy lifestyles

Adverse childhood experiences (ACEs)

It was decided that substance abuse will be a component of the behavioral health category. The areas of prevention / health behaviors and exercise, nutrition and weight were combined to become "healthy lifestyles," with chronic disease as a component of this category.

In addition, social determinants of health was deemed an underlying current of all priorities. It was discussed at length that the remaining health topics, not chosen as priorities, can be interrelated to the four chosen priorities. It was also important that the four chosen priorities correlated strongly with the St. John mission to serve all people, with special attention to those who are poor and vulnerable, as well as the organization's internal Catholic Identity Matrix, which in part evaluates work related to "solidarity with those who live in poverty."

Conclusion

This report describes the findings of a comprehensive health needs assessment for the residents of Creek County, Okla. The prioritization of the identified significant health needs will guide the community health improvement efforts

of St. John Sapulpa and Ascension St. John as a whole. From this process, St. John will outline how it plans to address the top four prioritized health needs in the fiscal year 2020-2022 implementation strategy.

Our Catholic health ministry is dedicated to spiritually centered, holistic care that sustains and improves the health of not only individuals, but the communities we serve. With special attention to those who are poor and vulnerable, we are advocates for a compassionate and just society through our actions and words. St. John is dedicated to serving patients with compassionate care and medical excellence, making a difference in every life we touch.
